The company is in several U.S. magazines for its stylish product range that can suit women of each size. All styles are displayed by the prestigious New York Fashion Boutique show and the Las Vegas WWD Magic Show. Image credit: Roblox Combining education and gaming is nothing new and many of us grew up playing popular titles such as The Oregon Trail, Sim City and Reader Rabbit However, with advances in both computer and graphic power, today's educational games offer children the ability to build their own virtual worlds. Mojang's Minecraft, which was acquired by Microsoft in 2014 for \$2.5bn, is one recent example of how a software company could capitalize on this trend. Roblox, which hit 80m monthly active users this year, took a different approach by making coding a major component of its platform. To understand how Roblox works and the way it emphasizes creation, TechRadar Pro spoke to the company's chief business officer Craig. Talked. making Roblox unique is that we have an UGC platform. Our creator community built each of the over 56+ million worlds you see on Roblox. We produce no games ourselves, instead we fuel the imagination of the more than 2M independent developers and creators—many who start as players on Roblox—by providing the tools and resources they need to bring their worlds to life. These interactive 3D experiences offer something different – a collaborative, immersive space for shared experiences. The world's are all very wide open and experiative, which is why we're so attractive. Our mission to bring the world together through the game: playing together to build a game, or playing a game. We believe that playing, like sleep, is a necessity for good health and happiness - Roblox taps into this instinctive need to use your imagination for self-directed play. Image Credit: Roblox Our business model is unique: our industry a functioning economy on our platform. We sell virtual currency to our players; our creators sell things in their games (cars, clothes, accessories, gear) and Roblox takes a fraction of these earnings. This economy is self-correcting. If creators are too aggressive with monetization, players will avoid the experience. When creators find engaging ways to monetize, those ideas quickly take off and inspire others. We also make it very simple for our creators to have constant updates to make their games. Top game creators are updating aspects of their games weekly or monthly that create a dynamic experience for our users. Every time they sign up, they experience something else they come back! Developers can monetize their game to robux charge, our virtual currency, for in-game items and experiences. Players can buy Robux and then spend it on things like a fancy car or a piece of clothing in a game, and developers redeem the Robux they earn for real money. Roblox's founder Dave Baszucki (Image Credit: Roblox) From the start, Roblox was created with the aim of teaching kids to code and program, while also giving them an environment in which to play and learn. Our founder, Dave Baszucki's previous business was a coding education platform for kids. Dave noted that when kids completed the set curriculum, they were sitting around, building new elements and playing with other kids. Roblox was inspired by seeing kids learn through play. Because all the experiences are generated on our platform user, players are inspired and also want to create something. We promote that curiosity with free curriculum for educators to participate in school and after school programs, and share content and best practices with the community as a whole. In 2018 we also ran summer camps in more than 20 countries, coding, wildlife development and entrepreneurship – we have reached more than 50,000 children in Europe alone. What's more, twice a year we invite emerging creators to join us for a three-to-five-month internship program to work on a new or existing game, along with other developers, provide feedback to our engineering team and learn entrepreneurship skills. Roblox also offers self-guided classes on our website, and hosts online forums for co-learning opportunities to encourage kids to build their first game in a very simple, step-by-step way. We're already seeing a lot of people staying at the platform from childhood, to adulthood; they grew up with us! Some of the most successful creators on the Roblox platform started today as players when they were 7.8.9 or 10 years old. While continuing on the platform in middle school and high school ages, many began creating the next generation of experiences on the Roblox platform based on what they and their friends like to play, organically making the platform attractive to an even broader range of ages. Roblox's are even used in schools to help kids develop digital skills (Image Credit: Roblox) Yes! We created a Roblox Parent Guide that has detailed information to help parents create the Roblox experience best suited to their child. This includes guidance on the platform's security features, and instructions on how to use them. We also recently hired a director of digital civility, Laura Higgins, who heads our new Digital Civility Initiative. Through our new Digital Civility Initiative, we invest in three main areas: platform innovations to inspire positive play for developers and players; appeasing parents, caregivers and educators with actionable resources to promote community safety and digital civility; and partnering with digital security leaders to strengthen the platform and make a positive impact on the industry. Additionally, the best way to get a real understanding of the platform is to get involved. We know many parents who will sit and play Roblox with their kids, but - if you're not a gamer - it never hurts to watch your child as they figure out the platform and you can learn together. Image credit: Roblox International growth is a big focus for us. Our mission is to bring the world together through the game. Today, we have a global community of over 80 million monthly active users who spend nearly 1 billion hours a month on our platform. Roblox users and developers came from more than three dozen countries, but until recently our games and the support services we provided were only available in English. The Roblox platform was launched in Spanish last year and we are now working on make resources available in other languages, including French, German and Brazilian Portuguese. Customer service support, community moderation and parental resources are increasingly available in these languages, and developers will also be able to translate their games into local languages and into their local currency Be. There's a lot more to come - we just scratched the surface! Also check out the best student laptops laptops laptops
